

PINNACLIFE®

# National Nutrition Month

March has been designated as National Nutrition Month to promote healthy eating and better nutrition for Americans. This is a worthy cause as diet-related illnesses including obesity, heart disease, and diabetes have been increasing and contributing significantly to the cost of healthcare and reduced quality of life for millions of people.

At PinnacleLife®, we understand the importance of nutrition for overall health and wellness. We also understand that there are reasons why many people are not getting enough micronutrients like antioxidants, vitamins, minerals, and amino acids from their diet. This understanding has led to the development of the PinnacleLife® Nutritional Supplements. Utilizing a nutritional approach to cellular biology and biochemistry, the PinnacleLife® line of nutritional supplements was specifically designed to help your body get the tools it needs every day to support optimum health, especially when the natural diet is lacking.

***Some of the primary barriers to a healthy diet include:***  
**Affordability – Accessibility – Preparation Time**  
**Taste Preferences – Familiarity with Ingredients**

PinnacleLife® Supplements should be used in combination with a healthy diet, not as a replacement. They were designed as an affordable and easy way to boost the nutritional value of your diet to make sure your body is getting all the tools it needs daily to help ensure optimum health and nutrition. You can start today by using the PinnacleLife® Essential Health collection that provides a balanced blend of key antioxidants, vitamins, minerals, amino acids, *and more!*
